mothertongue

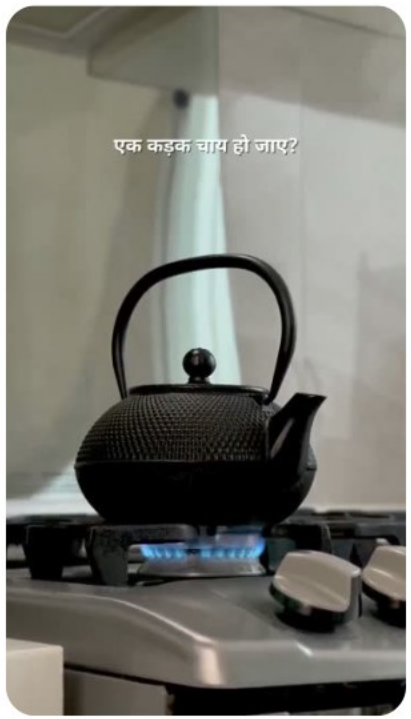

One ad.
Every audience,
in their own words.

Rohit Kashyap · mothertongue-flame.vercel.app

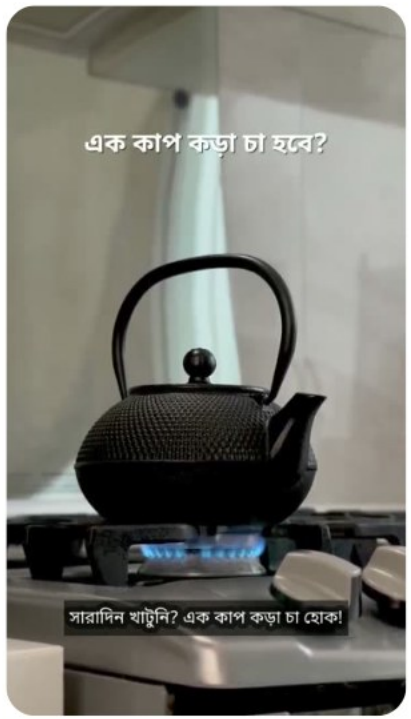

THE PROBLEM

“In Uttar Pradesh every ad I saw was in Hindi. I moved to Bengal — now they’re in Bengali.”

Big brands pay agencies for that. Everyone else runs one ad that half their audience doesn’t feel.

Lucknow · Hindi

Kolkata · Bengali

WHY IT HURTS

A proper version per region costs weeks. A cheap one sounds translated — and nobody trusts it unchecked.

Agencies + voice artists

A new script, a new voice and a new edit for every language — weeks of back and forth per campaign.

$2–20 per minute

What AI video translation costs today — and it still swaps words, not the way a city talks.

One wrong price

A wrong price or an invented offer in one language is a real loss — so every AI version gets checked by hand.

Source: pictory.ai, “10 Best AI Video Translators We Tested in 2026”, 12 Aug 2026.

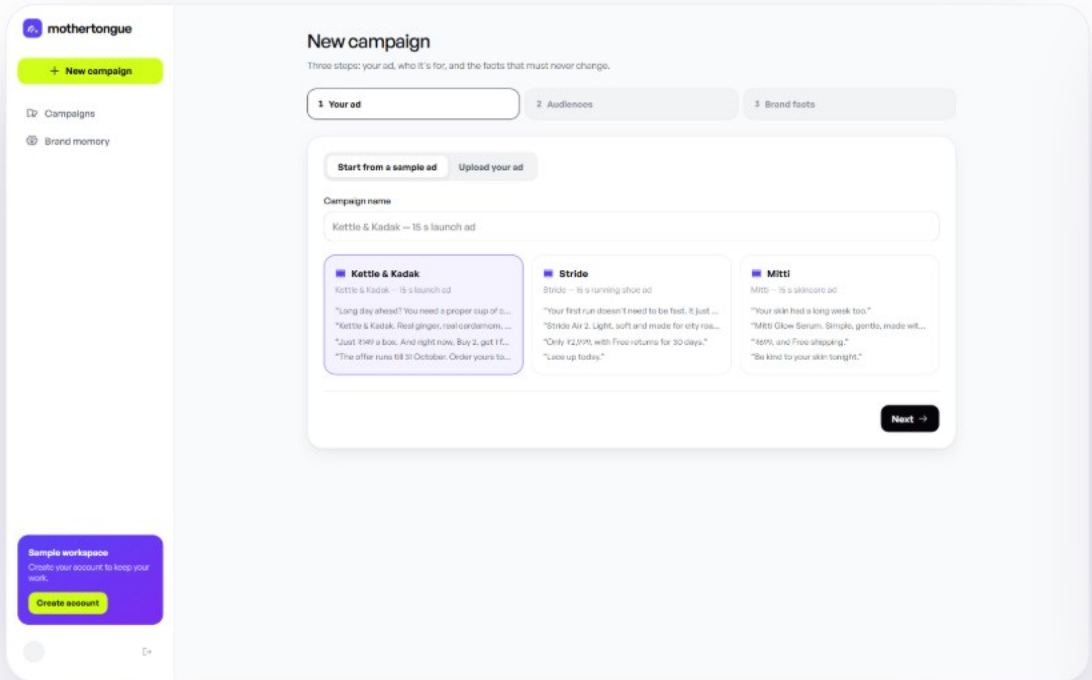

WHY NOW

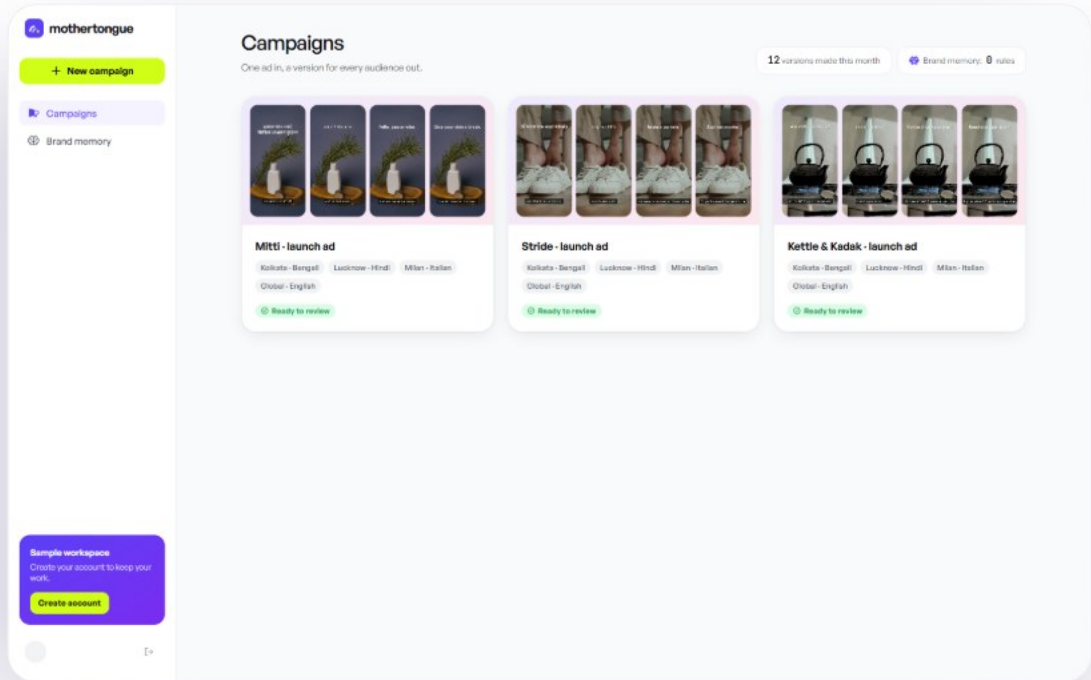

Open models can now see an ad, write and speak many languages, and check the result. Cheaply enough to make one version per audience.

MotherTongue runs every AI step on AMD: a version takes about ten model calls and two minutes — not an agency and a fortnight.

THE PRODUCT

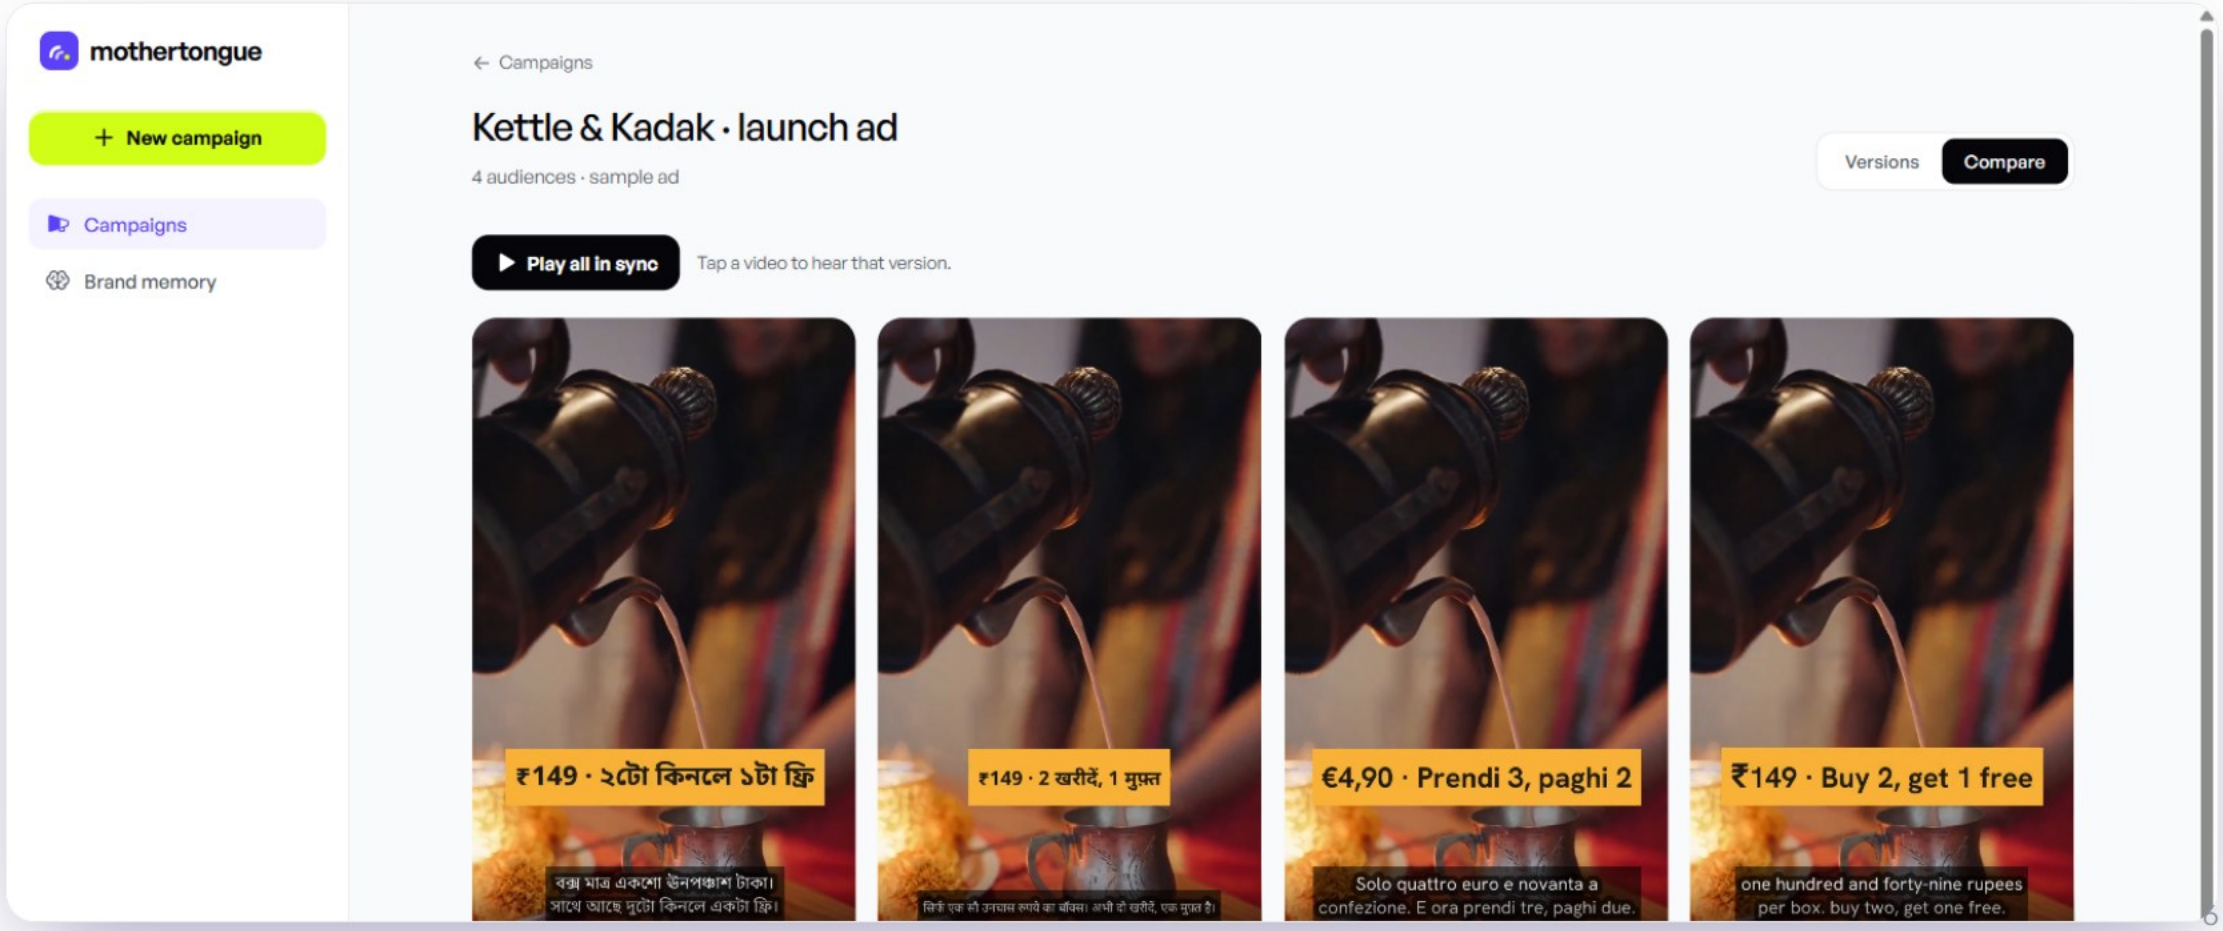

Upload once. Pick audiences. Review and approve.

THE MOMENT

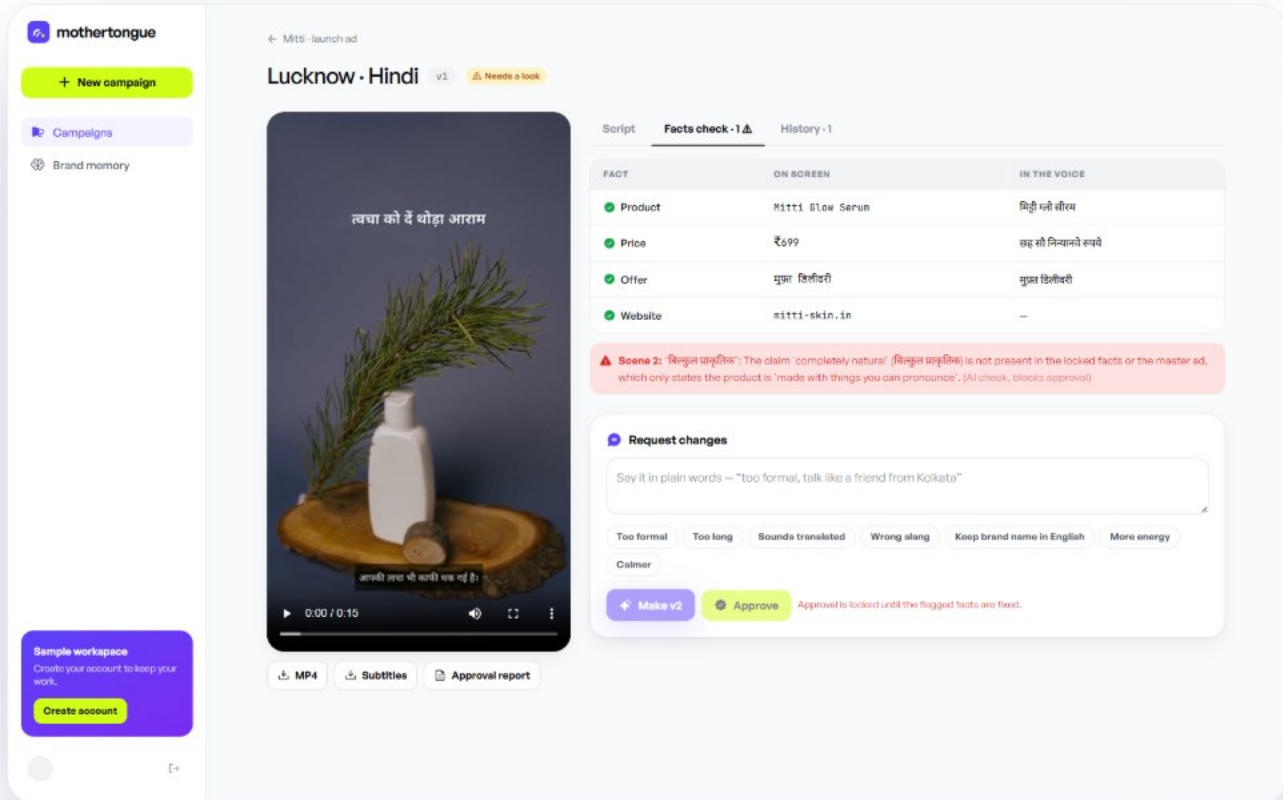

One ad, four audiences, four different ads. Every price exactly as the brand set it.

YOU STAY IN CHARGE

It caught a claim the brand never made. Then it learned.

- v1 said “completely natural” in Hindi — blocked, Approve locked
- The marketer asked in plain words
- v2 in ~3 minutes, only that line changed
- Rule saved to brand memory for next time

BUSINESS MODEL

Pay for the versions you approve. Agencies pay monthly.

Free

3 versions on your own ad. Every language we offer. No credit card.

Pro · per approved version

Unlimited campaigns, MP4 + subtitles, approval report. You never pay for a version you reject.

Agency · monthly

Several brands, client review links, team approvals. (coming soon)

Our AI cost per version on AMD's meter: about **$0.0002** at listed rates (≈10 calls). What buyers pay today: **$2–20 per minute** for AI dubbing alone, far more for an agency.

WHO BUYS

Everyone who sells to people who don't all speak the same way.

D2C and consumer brands

Selling across states and countries, running the same ad everywhere today.

Regional businesses

Growing beyond one city, with no budget for an agency per language.

Agencies

Making regional versions for clients — in a day, with the client's rules applied.

India first — 22 languages in the Eighth Schedule of the Constitution — then Europe (Italy, Spain, Germany).

COMPETITION

Others swap the voice. We re-make the ad — and lock the facts.

	WRITTEN FOR EACH CITY	FACTS LOCKED + CHECKED	LEARNS YOUR TASTE	TIME PER VERSION
Dubbing tools	Translated	No	No	**Minutes**
Personalised-video platforms	Name / field swaps	Template fields	No	**Minutes**
Agencies	**Yes**	By hand	Slowly	Weeks
MotherTongue	**Yes**	**Every version**	**Brand memory**	**Minutes**

PROOF — MEASURED, SMALL SAMPLES

16/16

planted wrong facts caught before approval, in 4 languages — 0 false alarms on clean controls

12

real versions made on AMD: 3 sample ads × Bengali, Hindi, Italian, English

~10

AI calls and ~2 minutes per version — plus a review loop that made v2 in ~3 minutes

Every number has a result file in the public repo: evidence/planted.json · evidence/cost.json · evidence/phase1/.

GO-TO-MARKET

Start where ads already run in many languages.

- D2C brands running Meta and YouTube ads across Indian states
- Agencies as resellers — one workspace per client brand
- Free tier: 3 versions on your own ad, so the product sells itself
- Five design partners first, before any paid acquisition

ROADMAP

What comes next. Each step only after it works properly.

More languages

Tamil, Telugu, Marathi, Kannada — each added only after its voice is tested.

Per-store versions

The local shop's name and address in each version, at scale.

Publish

Send approved versions straight to Meta and YouTube ad accounts.

Teams

Client review links and team approvals for agencies.

TEAM + ASK

Rohit Kashyap — full-stack developer, Kolkata. Ships fast; hackathon winner. Built MotherTongue end to end.

The ask: **5 design partners** — brands or agencies — and compute credits to grow the languages.
